

Hortifeeds is unique

We are specialists in providing professional growers with a comprehensive service, covering all plant nutritional needs

Hortifeeds manufactures and supplies a wide range of high quality fertilisers and biostimulants to provide comprehensive nutrition and optimise yield and quality of fruit crops.

We can help create bespoke fertiliser programmes, provide water, substrate and soil analysis and advice on application rates and timings.

HortiPhyte **Phosphite Biostimulant**

Fast acting phosphite fertiliser helps activate natural plant defences and improves rooting and establishment.

HortiPhyte (4-25-16) is based on potassium phosphite, a readily absorbed form of phosphorus which is rapidly mobilised and transported throughout plant tissues.

HortiPhyte benefits:

- Increases the rate of energy transfer within the plant
- Improves root and shoot initiation and development
- Enhances yields and fruit quality
- Creates healthy plants that resist disease attack, reducing the dependence on fungicides
- Stimulates natural plant defences
- Good levels of potassium help budding and fruit yield

Designed for foliar application, drip fertigation or drench

Amētros™ **Calcium Mobility Enhancer**

Mobilises calcium within crops using patented CaT™ Technology to boost fruit firmness and quality. Contains additional calcium to increase benefits. Prevents calcium disorders.

Designed for foliar application. CaT™ is designed to mobilise calcium and increase its concentration in cells, especially in fruit.

Amētros™ improves crop quality, storage and shelf-life, prevents bitter pit, cherry cracking and other calcium disorders, less crop waste and more marketable yield

HortiBoost **The Complete Biostimulant**

Comprehensive package containing seaweed, amino acids, humic acids and trace elements. Boosts healthy development and nutrient use efficiency. Aids recovery from stress events. Can be applied via foliar application or fertigation.

Fast acting absorption and uptake ensures maximum utilisation of nutrients to optimise growth efficiency.

Boost growth and early fruit swell stages of fruit crops.

Apply before and after any stress situation to help crops prepare for and recover from stress.

HortiPhos
Concentrated Phosphorus

A readily absorbed phosphorus fertiliser also containing calcium and nitrogen. Phosphorus is essential for energy transfer, respiration and photosynthesis. With added calcium, HortiPhos enhances fruit quality and shelf-life.

Marinure®
Concentrated Seaweed

A concentrated seaweed extract rich in minerals and trace elements. Promotes healthy plants with stronger root systems. Naturally increases resistance to abiotic stress (drought, waterlogging and chill/heat stress).

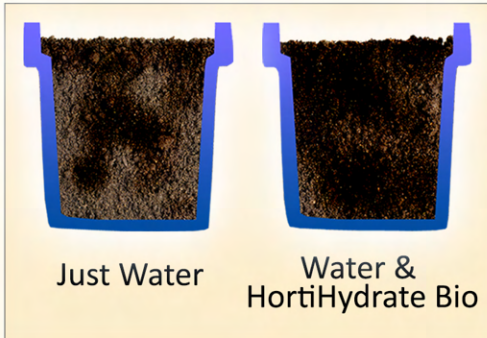

Mærit®
Establishment Booster

A concentrated blend of plant extracts and high-quality seaweed. Rich in biostimulants, polysaccharides and trace elements for rapid establishment of crops. Metabolically enhances the uptake and utilisation of nutrients.

HortiFol TF Bud
Bud Primer and Invigorator

A post-harvest or early spring fertiliser that supports both overwintering tree nutrient storage and spring growth. Primes crops ready for spring growth. Ideal feed post-harvest to prepare the crop for the following season.

HortiHydrate Bio
Sustainable Wetter

Wetting agents help to improve water and nutrient use efficiency, reduce dry spots in substrate and reduce stress in heat and drought conditions. Environmentally friendly and certified for use in organic growing systems.

HortiStar 21% Si
Silicon Defence

Fast-acting silicate foliar fertiliser, which enhances plant defences, improves nutrient uptake, and increases resilience to stress, pests, and pathogens. Strengthens leaf structure to maintain photosynthesis under tough conditions.
